# TECHNICAL CHALLENGES

We've heard developers say...

“We have a workflow we want to model on blockchain, but it would take us **months of development time and hundreds of thousands of dollars** to create a PoC.”

“It's **difficult to connect to our existing IT infrastructure**, and our blockchain application sits on an island.”

“Our company is **unsure of which vendors will be around for the long haul**, what products they have, and how they will support our strategic direction.”

“I'm spending all of my time **scaffolding together an infrastructure**, not writing smart contracts.”

“Blockchain isn't an option for us, because we would have to put **sensitive data on an unsecure platform**.”

# And makes developing an end-to-end blockchain app a huge undertaking

Link identities to federated systems

Integrate with existing business apps

Configure consortium network

Ingest messages and events

Manually deploy ledger

Write business logic

Synchronize data with off-chain DB

Build client

API management

Orchestrate signing, hashing and routing

Customize integrations

Manage keys

Extend capabilities

Store smart contract reference data

## Agenda

Why Blockchain?

From Coins to Smart Contract

The Workbench

Beyond Workbench and PoCs

Current Use Cases

A white semi-truck is shown in profile, facing left. The truck has a white cab and a long white trailer. A horizontal blue stripe runs across the middle of the trailer, and the words "TRUCK PAYMENT" are written in black, sans-serif capital letters across this stripe. The truck is set against a plain white background.

TRUCK PAYMENT

# Truck payment in high-risk markets

## PoC:

Risc Mitigation

## Key Risks:

- Banking Infrastructure
- Legal trust

## Infrastructure:

Pay with Crypto Currency

## Legal trust:

Truck knows if it is payed  
and acts according to contract

# Block- & Supply Chains

# Avoid Trust Cost

New business partners  
trying to cooperate on  
global networks

Disparate  
infrastructure and  
regulation

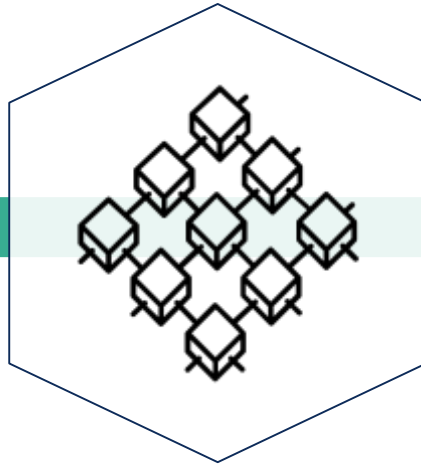

Trust cost in contracts,  
time, manual work,  
lawyers, negotiation,  
escrows...

# Block- & Supply Chains

New business partners  
trying to cooperate on  
global networks

Shared, permissioned,  
cryptographic secure,  
trust-proof

**ONE SHARED TRUTH**

# What's in our production?

Rubber  
Quality Proof

Pallet Pooling

Food Supply  
Chain

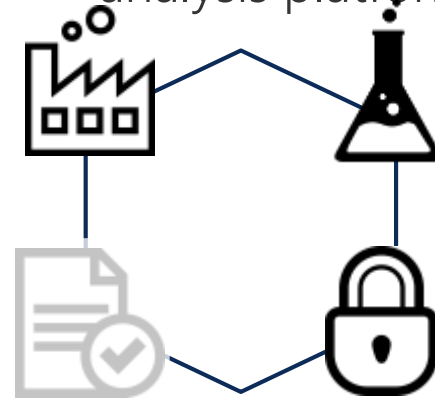

# What's in our production? → Rubber Quality Proof

Firestone & Ford tire scandal

- 800 injuries
- 23 million tires replaced
- End of 100y partnership
- \$1,6 bn lawsuit
- -50% market price

Production data exchange & analysis platform

- Chemical formula & CoA reports *"on the blockchain"*
- Document-hashes, raw material barcodes/RFID create production history
- Original documents are revealed and compared to the hash, **only** in accident case
